

# HOW TO MEASURE YOUR BOAT FOR THE PERFECT SHADE

**TOOLS NEEDED:** Two People + Tape Measure + Long Object (PVC/Broom/Fishing Rod/Etc.)

## SHADE SIZES:

Measurement from (1) to (2).

**Small 48 :** 65 - 75"

**Medium 77.5 :** 95 - 105"

**M/L 100 :** 105 - 120"

**Large 130.5 :** 145 - 155"

1. Find location to mount hook on tower (shade functions best when mounted on underside our outside of T-top lip).  
**OR** Find location to loop cinch strap to (rod holder, handle, between rope on soft top tower).
2. On a long object, measure up 6 ft. from its base (mark your measurement) and place it in the rod holder at the approximate angle of the rod holder. Measure from your 6' mark to the mounting point on tower (1). **NOTE:** If measurement is in-between the 4 listed sizes, move the mounting point forward/backward on tower to get correct size
